Education

Woxsen University

B.Tech in Computer Science Engineering

2024 – 2028

Hyderabad, India

Experience

Stealth Startup

AI/ML Engineering Intern

May 2026 – Jul 2026

Hyderabad, Telangana, India (Hybrid)

- Built and deployed production AI/ML applications by developing Python backend services, integrating LLMs, RAG pipelines, SQL, and cloud infrastructure, enabling scalable real-world AI solutions.
- Accelerated AI development by designing agentic workflows with LangChain, LangGraph, and OpenAI-compatible tooling, reducing manual effort and improving automation.
- Improved model reliability by implementing MLOps best practices including experimentation, evaluation, version control with Git, AI orchestration, and production deployment workflows.
- Delivered business-ready AI solutions by collaborating with cross-functional teams and communicating complex technical concepts to non-technical stakeholders, ensuring successful project execution.

AI Research Centre – Woxsen University

AI/ML Intern

Jan 2025 – Aug 2025

Hyderabad, Telangana, India (On-site)

- Reduced ERP deployment time by **50%** (40s → 20s) by containerizing three microservices with Docker, optimizing image caching, and streamlining deployment workflows.
- Supported **6,000+ users** by architecting scalable Python backend services, developing REST APIs with Flask, PostgreSQL, and SQL-driven business logic for leave, holiday, and outing management.
- Improved deployment reliability by implementing CI/CD pipelines with GitHub Actions, automating testing, deployments, and database sharding workflows for production environments.
- Delivered a production-ready ERP leave management system by collaborating within a six-member engineering team, following Git-based development practices and communicating technical solutions across stakeholders.

Projects

featrs

2025 – Present

Rust, Polars, Apache Arrow, GitHub Actions | GitHub

- Built an open-source feature engineering library for Rust by leveraging Polars and Apache Arrow, enabling high-performance preprocessing for machine learning pipelines.
- Expanded ML preprocessing capabilities by implementing scalable feature engineering algorithms including scaling, encoding, feature selection, imputation, and missing-value handling.
- Improved code quality and release reliability by implementing comprehensive testing, GitHub Actions CI/CD, automated documentation, and semantic versioned releases.

Obsidian AI Note Refactor

Jan 2025 – Feb 2025

Python, Ollama, LLMs, RAG | GitHub

- Automated knowledge management by building an AI pipeline in Python using Ollama, LangChain, and LangGraph to orchestrate locally hosted LLMs for restructuring and refining Obsidian notes.
- Improved information retrieval by implementing RAG pipelines with vector embeddings, semantic search, and LLM-powered workflows to generate context-aware summaries, tags, and linked document structures.
- Enhanced AI agent performance by transforming unstructured notes into a consistent, searchable knowledge base optimized for downstream agentic workflows, contextual retrieval, and personal AI assistants.

Achievements

Tensor v2.0 Hackathon <i>First Runner-Up — National Level Hackathon</i>	2025 <i>Woxsen University</i>
Sport Chanbara (Spochan) — International Tournament <i>Represented India at the World Tournament</i>	2023 <i>Tokyo, Japan</i>
