Education

Woxsen University

B.Tech in Computer Science Engineering

2024 – 2028

Hyderabad, India

Experience

Stealth Startup

AI/ML Engineering Intern

May 2026 – Jul 2026

Hyderabad, Telangana, India (Hybrid)

- Deployed production ML services using Python, Docker, SQL, and cloud infrastructure, improving scalability and reliability of model inference.
- Built automated CI/CD pipelines for data preprocessing, model deployment, and testing using GitHub-based workflows, reducing manual intervention and improving reproducibility.
- Worked on troubleshooting production deployments while optimizing caching, scaling, and parallelization strategies for ML workloads.
- Collaborated with cross-functional engineering teams to productionize ML systems following DevOps and security best practices.

AI Research Centre – Woxsen University

AI/ML Intern

Jan 2025 – Aug 2025

Hyderabad, Telangana, India (On-site)

- Cut ERP deployment time by **50%** (40s → 20s) by containerizing three microservices with Docker.
- Built Flask REST APIs backed by PostgreSQL, supporting **6,000+ users** across production ERP services.
- Automated testing, deployment, and database migrations by implementing CI/CD pipelines with GitHub Actions and Docker.
- Delivered production-ready backend services while troubleshooting deployment issues and maintaining secure REST APIs as part of a six-member engineering team.

Projects

featrs

2025 – Present

Rust, Polars, Apache Arrow, GitHub Actions | GitHub

- Built an open-source feature engineering library in Rust with Polars and Apache Arrow for scalable ML preprocessing pipelines.
- Implemented normalization, encoding, feature selection, imputation, and missing-value handling as reusable components.
- Set up automated testing, semantic versioning, and GitHub Actions CI/CD to ensure reliable releases.
- Optimized preprocessing performance through Rust-based parallelization, efficient memory management, and scalable columnar data processing.

Bare-Metal Kubernetes Cluster with K3s

Jun 2026

Kubernetes, K3s, Docker, Linux, MetalLB, Longhorn, Prometheus, Grafana | Blog

- Deployed a five-node bare-metal Kubernetes cluster using K3s across Raspberry Pi 5 and x86 systems following DevOps best practices.
- Implemented Infrastructure as Code (IaC), networking, storage, and load balancing using Kubernetes, MetalLB, Longhorn, and Local Path Provisioner.
- Configured monitoring and logging using Prometheus, Grafana, and Metrics Server while hosting 10+ production self-hosted services including PostgreSQL, Redis, Gitea, Drone CI, and Nextcloud.
- Optimized scheduling, scaling, caching, and multi-architecture deployments using Kubernetes node affinity, ARM64/AMD64 images, Docker containers, and secure networking.

Achievements

Tensor v2.0 Hackathon <i>First Runner-Up — National Level Hackathon</i>	2025 <i>Woxsen University</i>
Sport Chanbara (Spochan) — International Tournament <i>Represented India at the World Tournament</i>	2023 <i>Tokyo, Japan</i>
