Education

Woxsen University

B.Tech in Computer Science Engineering (AI & ML) CGPA: 8.3/10

2024 – 2028

Hyderabad, India

Experience

iGlobus Corporate Consulting

Forward Deployed ML Intern

Aug 2026 – Nov 2026

Hyderabad, Telangana, India · Hybrid

- Delivered DPDP compliance work across **5 client engagements**, 2 readiness assessments and 3 PII ML discovery projects, by embedding with US client teams and building fixes in their stack.
- Found personal data clients did not know they held by running rules plus ML classification over databases, logs, tickets, backups, and object storage, with documented precision and false-positive rates.
- Turned statutory duties into product controls: granular consent with withdrawal propagation, a Data Principal rights workflow with audit trail, retention with automated deletion, and a 72-hour breach runbook.
- Made the statute actionable by translating DPDP Act 2023 and Rules 2025 duties into engineering acceptance criteria, producing gap assessments non-technical stakeholders acted on across US time zones.

Symboynt

AI Engineering Intern

May 2026 – Jul 2026

Hyderabad, Telangana, India · Hybrid

- Automated AI workload infrastructure with Kubernetes orchestration, CI/CD pipelines, and cluster management, so containerized services deploy with no manual steps.
- Shipped production applications by developing Python backend services, REST APIs, and RAG pipelines, integrating LLMs, SQL, and cloud infrastructure.
- Removed manual AI workflow steps by building multi-agent systems with LangGraph, LangChain, and OpenAI-compatible tooling that run end to end.
- Improved release reliability with MLOps practice: versioned experiments, evaluation, Git version control, and production deployment workflows.

Woxsen AI Research Centre – Woxsen University

Software Engineering Intern

Jan 2025 – Aug 2025

Hyderabad, India

- Cut ERP deployment time **50%** (40s to 20s) by containerizing three microservices with Docker and tuning image caching and parallelization.
- Backed a production ERP platform serving **6,000+ users** by architecting Python backend services and REST APIs with Flask, PostgreSQL, and SQL-driven leave, holiday, and outing logic.
- Improved delivery reliability by implementing GitHub Actions CI/CD for automated testing, deployment, and database sharding and migration workflows.
- Shipped a production-ready leave management system on a six-member engineering team using Git-based development practice.

Projects

AITER COMMERCE

Rust, axum, Ed25519, RFC 9421, Razorpay, MCP | [GitHub](#)

2026

- Made a store agent-buyable so an AI agent can discover a catalog, build a cart, and complete an order end to end, on a Rust workspace with a pure commerce core and a thin axum HTTP surface.
- Enforced payment trust with per-agent spend caps, receipts, and an append-only audit log, signing every mutating request with Ed25519 per RFC 9421 and reconciling Razorpay payment-link webhooks to paid orders.

pre-mortem

Python, FastAPI, Next.js, Postgres, pgvector, Hindsight, Laya | [live](#)

2026

- Built a decision-review agent for the Hindsight AI Agents hackathon, live at premortem.lexcontra.com: it searches company decision history, cites each precedent by id, and returns no verdict when no precedent exists.
- Measured intent routing instead of asserting it: Laya's domain probability separates chat, query, and decision classes before retrieval runs, with a decision-class message scoring 0.99.

Bare-Metal Kubernetes Cluster

Kubernetes, K3s, Proxmox, Docker, MetalLB, Longhorn, Prometheus, Grafana | [Blog](#)

2025

- Deployed a five-node bare-metal Kubernetes cluster with K3s on Raspberry Pi 5 and x86 hardware, hosting **10+ self-hosted services** in production.
- Achieved zero-downtime service routing with MetalLB and Nginx ingress across heterogeneous nodes, configuring Longhorn storage, load balancing, and node affinity for multi-arch images.

Technical Skills

Client-facing delivery: Stakeholder interviews, system and data-flow discovery, gap assessments, legal duties to engineering acceptance criteria, technical detail for non-technical audiences

AI and ML: PII detection and sensitive-data classification, NLP over unstructured text, entity recognition, embedding-based clustering, classifier precision and recall evaluation, RAG pipelines, LangChain, LangGraph, Generative AI

Backend and data: Python, FastAPI, Flask REST APIs, REST API design, SQL, data mapping and RoPA design, PostgreSQL, MongoDB, Redis, pgvector, Pandas, NumPy, Polars

Compliance and privacy: DPDP Act 2023 and DPDP Rules 2025, GDPR comparison, consent architecture with withdrawal propagation, DSAR workflows, retention with automated deletion, 72-hour breach notification runbooks, DPIA methodology, ISO 27001 and SOC 2 control mapping, DPO certified

Cloud and infrastructure: Docker, Kubernetes, K3s, GitHub Actions CI/CD, Linux, cloud storage scanning, monitoring

Achievements

Tensor v2.0 Hackathon	2025
<i>First Runner-Up, National Level Hackathon</i>	<i>Woxsen University</i>
Sport Chanbara (Spochan), International Tournament	2023
<i>Represented India at the World Tournament</i>	<i>Tokyo, Japan</i>

Certifications

Data Protection Officer (DPO)	Certified
<i>Privacy and data protection compliance</i>	<i>Law and engineering</i>
